## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 6\_COD\_Question 1

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

John and Mary are collaborating on a project that involves data analysis. They each have a set of age data, one sorted in ascending order and the other in descending order. However, their analysis requires the data to be in ascending order.

Write a program to help them merge the two sets of age data into a single sorted array in ascending order using merge sort.

#### **Input Format**

The first line of input consists of an integer N, representing the number of age values in each dataset.

The second line consists of N space-separated integers, representing the ages of participants in John's dataset (in ascending order).

The third line consists of N space-separated integers, representing the ages of participants in Mary's dataset (in descending order).

Output Format participants in Mary's dataset (in descending order).

## **Output Format**

The output prints a single line containing space-separated integers, which represents the merged dataset of ages sorted in ascending order.

Refer to the sample output for formatting specifications.

## Sample Test Case

```
Input: 5
13579
    108642
    Output: 1 2 3 4 5 6 7 8 9 10
    Answer
    #include <stdio.h>
    void merge(int arr[], int left[], int right[], int left_size, int right_size) {
      int i=0, j=0, k=0;
      while(i<left_size && j<right_size)
        if(left[i]<=right[j])</pre>
           arr[k]=left[i];
           i++:
         else{
           arr[k]=right[j];
           j++;
         k++:
      while(i<left_size)
         arr[k]=left[i];
         i++;
         k++;
```

```
while(j<right_size)
          arr[k]=right[j];
          j++;
          k++;
       }
     }
     void mergeSort(int arr[], int size) {
       if(size>1){
          int mid=size/2;
          int left[mid];
         int right[size-mid];
         for (int i=0;i<mid;i++)
          left[i]=arr[i];
          for(int i=mid;i<size;i++)
          right[i-mid]=arr[i];
          mergeSort(left,mid);
          mergeSort(right,size-mid);
          merge(arr,left,right,mid,size-mid);
       }
     }
     int main() {
       int n, m;
       scanf("%d", &n);
for (int i = 0; i < n; i++) {
scanf("%d" o
       for (int i = 0; i < n; i++) {
          scanf("%d", &arr2[i]);
       int merged[n + n];
       mergeSort(arr1, n);
       mergeSort(arr2, n);
       merge(merged, arr1, arr2, n, n);
       for (int i = 0; i < n + n; i++) {
         printf("%d ", merged[i]);
return 0;
```
